LOWER CRETACEOUS FOSSILS FROM THE SOURCES OF THE BARCOO, WARD AND NIVE RIVERS, SOUTH CENTRAL QUEENSLAND.

PART II.—CEPHALOPODA. 1

By R. ETHERIDGE, JUNE., Curator.

(Plates lxv.-lxviii.)

Of the few "Ammonites" contained in Mr. H. W. Blomfield's Collection only one requires detailed notice; this will conclude the account of the fossils presented by him to the Trustees. The whole series is a most instructive one, and has added largely to our knowledge of Australian Cretaceous Palæontology.

The species are:—
Schlænbachia rostratus, J. Sby., sp.

Haploceras daintreei, Eth., sp.

Amaltheus olene, Ten. Woods, sp.

I take the opportunity, also, of describing another Ammonite new to our Cretaceous rocks, and also a Gasteropod; these were sent to me from the Queensland Museum amongst the *Crioceri* lately described.

Genus Schlenbachia, Neumayr, 1875.

(Sitz. K. Akad. Wissensch. Wien., lxxi., 1 Abth., No. 5, 1875 p. 658.)

Obs.—A genus created for a series of variable species of Chalk Ammonites with strong and pronounced keels, such as A. rostratus, J. Sby., A. texanus, F. Roemer, A. varians, J. Sby., etc.

Schlænbachia Rostratus, J. Sby., sp.

(Plates lxv., lxvi., lxvii.)

Ammonites rostratus, J. Sby., Min. Conchol., ii., 1817, p. 163, pl. elxxiii.

Ammonites inflatus, J. Sby., ibid, p. 170, pl. clxxviii.

Ammonites inflatus, D'Orb., Pal. Franç. Terr. Crét., i. (Ceph.), 1841, p. 304, pl. xc.

¹ Continued from p. 188.
